Introducing the Perspective Collection

The Perspective Collection from Nucraft is a series of tables crafted by designer Joey Ruiter. The tables are designed for the posture orientation challenges that plague virtual meetings.

In addition, the shape of the tables allows remote participants to have a seat at the table, and for in-person users to have sightline views of both the in-person and the remote participants. The Perspective Collection has two product lines: Portal for 1-3 users, and Aspect for 4-9 users.

Standout features include:

- Table top connectivity with a Power Matrix or Grommet
- Sub top Connectivity with Power Rails or new Power Shelf
- Vertical equipment racking

The Perspective Collection has many integrated and intuitive power and data solutions.

Meant for groups with fewer people, Portal supports smaller spaces with virtual meeting technology, and positions users to sit square shoulder to the technology, similar to a restaurant booth. This posture promotes the feeling of privacy and acoustic control, while helping workers focus on the virtual connection.

Meanwhile Aspect, which is meant for larger groups, combines the features of sightline conference tables, traditional media tables, and round tables. The soft-pick shape of the tabletop can adjust to accommodate room sizes and technology constraints, while positioning users in a way that all participants, both remote and in-person, can always be seen and heard.

Available in a broad range of material and finish combinations, including veneer, laminate, glass, and stone, the tables in the Perspective Collection allow for full customization.
